

SINGAPORE CLINICAL RESEARCH INSTITUTE

The Singapore Clinical Research Institute (SCRI) engages in and facilitates the conduct of clinical trials, epidemiology and evidence synthesis, and other related research in Singapore. It is also involved in academic and educational activities promoting medical research conduct and methodology.

Research activities at the SCRI and its collaborating institutions include the following types of studies:

- Microdosing (Phase-0)
- Phase-1:
 - ✓ First-in-Man (FIM)
 - ✓ Pharmacokinetic (PK)
 - ✓ Single and Multiple Ascending Doses
 - ✓ Food interaction
 - ✓ Pharmacodynamic (PD)
 - ✓ Proof-of-Principle (POP)
- Phase-2:
 - ✓ Phase 2a Proof-of-Concept (POC)
 - ✓ Phase 2b
- Phase 3
- Methodological studies
 - ✓ Statistical methods
 - ✓ Outcome measurement and proxy endpoint
 - ✓ Trial designs
- Epidemiology and evidence synthesis

Biostatistician

You will join a team of statisticians and related professionals to be involved in supporting various clinical research projects and educational activities. This will include the design and analysis of clinical research studies, as well as providing on-site statistical consultation services for doctors and other researchers at collaborating hospitals and institutions.

Requirements:

- Masters in Statistics/Biostatistics/Epidemiology
- Experience with clinical research
- Good communication skills in English
