

Statistical Methods for QTL Mapping

CHAPMAN & HALL/CRC

Mathematical and Computational Biology Series

Aims and scope:

This series aims to capture new developments and summarize what is known over the entire spectrum of mathematical and computational biology and medicine. It seeks to encourage the integration of mathematical, statistical, and computational methods into biology by publishing a broad range of textbooks, reference works, and handbooks. The titles included in the series are meant to appeal to students, researchers, and professionals in the mathematical, statistical and computational sciences, fundamental biology and bioengineering, as well as interdisciplinary researchers involved in the field. The inclusion of concrete examples and applications, and programming techniques and examples, is highly encouraged.

Series Editors

N. F. Britton

*Department of Mathematical Sciences
University of Bath*

Xihong Lin

*Department of Biostatistics
Harvard University*

Hershel M. Safer

*School of Computer Science
Tel Aviv University*

Maria Victoria Schneider

European Bioinformatics Institute

Mona Singh

*Department of Computer Science
Princeton University*

Anna Tramontano

*Department of Biochemical Sciences
University of Rome La Sapienza*

Proposals for the series should be submitted to one of the series editors above or directly to:
CRC Press, Taylor & Francis Group

3 Park Square, Milton Park
Abingdon, Oxfordshire OX14 4RN
UK

Published Titles

Algorithms in Bioinformatics: A Practical Introduction <i>Wing-Kin Sung</i>	Differential Equations and Mathematical Biology, Second Edition <i>D.S. Jones, M.J. Plank, and B.D. Sleeman</i>
Bioinformatics: A Practical Approach <i>Shui Qing Ye</i>	Dynamics of Biological Systems <i>Michael Small</i>
Biological Computation <i>Ehud Lamm and Ron Unger</i>	Engineering Genetic Circuits <i>Chris J. Myers</i>
Biological Sequence Analysis Using the SeqAn C++ Library <i>Andreas Gogol-Döring and Knut Reinert</i>	Exactly Solvable Models of Biological Invasion <i>Sergei V. Petrovskii and Bai-Lian Li</i>
Cancer Modelling and Simulation <i>Luigi Preziosi</i>	Game-Theoretical Models in Biology <i>Mark Broom and Jan Rychtář</i>
Cancer Systems Biology <i>Edwin Wang</i>	Gene Expression Studies Using Affymetrix Microarrays <i>Hinrich Göhlmann and Willem Talloen</i>
Cell Mechanics: From Single Scale-Based Models to Multiscale Modeling <i>Arnaud Chauvière, Luigi Preziosi, and Claude Verdier</i>	Genome Annotation <i>Jung Soh, Paul M.K. Gordon, and Christoph W. Sensen</i>
Clustering in Bioinformatics and Drug Discovery <i>John D. MacCuish and Norah E. MacCuish</i>	Glycome Informatics: Methods and Applications <i>Kiyoko F. Aoki-Kinoshita</i>
Combinatorial Pattern Matching Algorithms in Computational Biology Using Perl and R <i>Gabriel Valiente</i>	Handbook of Hidden Markov Models in Bioinformatics <i>Martin Gollery</i>
Computational Biology: A Statistical Mechanics Perspective <i>Ralf Blossey</i>	Introduction to Bioinformatics <i>Anna Tramontano</i>
Computational Hydrodynamics of Capsules and Biological Cells <i>C. Pozrikidis</i>	Introduction to Bio-Ontologies <i>Peter N. Robinson and Sebastian Bauer</i>
Computational Neuroscience: A Comprehensive Approach <i>Jianfeng Feng</i>	Introduction to Computational Proteomics <i>Golan Yona</i>
Computational Systems Biology of Cancer <i>Emmanuel Barillot, Laurence Calzone, Philippe Hupé, Jean-Philippe Vert, and Andrei Zinovyev</i>	Introduction to Proteins: Structure, Function, and Motion <i>Amit Kessel and Nir Ben-Tal</i>
Data Analysis Tools for DNA Microarrays <i>Sorin Draghici</i>	An Introduction to Systems Biology: Design Principles of Biological Circuits <i>Uri Alon</i>
	Kinetic Modelling in Systems Biology <i>Oleg Demin and Igor Goryanin</i>
	Knowledge Discovery in Proteomics <i>Igor Jurisica and Dennis Wigle</i>

Published Titles (continued)

Meta-analysis and Combining Information in Genetics and Genomics
Rudy Guerra and Darlene R. Goldstein

Methods in Medical Informatics: Fundamentals of Healthcare Programming in Perl, Python, and Ruby
Jules J. Berman

Modeling and Simulation of Capsules and Biological Cells
C. Pozrikidis

Niche Modeling: Predictions from Statistical Distributions
David Stockwell

Normal Mode Analysis: Theory and Applications to Biological and Chemical Systems
Qiang Cui and Ivet Bahar

Optimal Control Applied to Biological Models
Suzanne Lenhart and John T. Workman

Pattern Discovery in Bioinformatics: Theory & Algorithms
Laxmi Parida

Python for Bioinformatics
Sebastian Bassi

Quantitative Biology: From Molecular to Cellular Systems
Sebastian Bassi

Spatial Ecology
Stephen Cantrell, Chris Cosner, and Shigui Ruan

Spatiotemporal Patterns in Ecology and Epidemiology: Theory, Models, and Simulation
Horst Malchow, Sergei V. Petrovskii, and Ezio Venturino

Statistical Methods for QTL Mapping
Zehua Chen

Statistics and Data Analysis for Microarrays Using R and Bioconductor, Second Edition
Sorin Drăghici

Stochastic Modelling for Systems Biology, Second Edition
Darren J. Wilkinson

Structural Bioinformatics: An Algorithmic Approach
Forbes J. Burkowski

The Ten Most Wanted Solutions in Protein Bioinformatics
Anna Tramontano

Contents

List of Figures	xiii
List of Tables	xv
Preface	xvii
1 Biological Background	1
1.1 A Brief Sketch of the History of Genetics and Mendel's Pea Plant Experiments	1
1.2 Basic Elements of Genetics	3
1.2.1 Cells, Chromosomes and DNA Sequences	3
1.2.2 Genes	5
1.2.3 Genetic Traits and Phenotypes	5
1.2.4 Gene Effects and Genetic Modes	6
1.3 Cell Division, Crossover and Recombination	7
1.3.1 Mitosis	8
1.3.2 Meiosis	9
1.3.3 Recombination	11
1.4 Gene Expression	12
1.4.1 Transcription	12
1.4.2 Translation	13
1.4.3 Gene Regulation	14
1.5 Genetic Maps and Mapping Functions	15
1.5.1 Cytogenetic Maps	15
1.5.2 Physical Maps	15
1.5.3 Genetic Linkage Maps	15
1.5.4 Crossover Interference	17
1.5.5 A General Form of Mapping Functions	18
1.5.6 Special Mapping Functions	20
1.6 Experimental Crosses	21
1.6.1 The Mechanism of Selfing and Sibling Mating	22
1.6.2 The F_1 Generation	24
1.6.3 Backcross	25
1.6.4 Intercross	26
1.6.5 Recombinant Inbred Lines	26

1.6.6	Other Experimental Crosses	30
2	Selected Topics in Statistics	31
2.1	Population and Distribution	31
2.1.1	Natural Population and Statistical Population	31
2.1.2	Distributions	32
2.1.3	Special Distributions	34
2.2	Random Variable, Samples, Statistics and Related Distribution	39
2.2.1	Random Sample and Statistics	39
2.2.2	t , χ^2 and F Distributions	41
2.2.3	Distributions of Sample Mean and Sample Variance .	42
2.3	Estimation	42
2.3.1	Maximum Likelihood Estimation	42
2.3.2	Method of Moments	44
2.3.3	Unbiasedness, Mean Square Error and Consistency .	45
2.3.4	Interval Estimation	46
2.3.4.1	Asymptotic Confidence Intervals	46
2.3.4.2	Bootstrap Confidence Intervals	47
2.4	Hypothesis Testing	48
2.4.1	Neyman-Pearson Framework	49
2.4.2	t -Test and F -Test	50
2.4.3	Pearson's χ^2 -Test	52
2.4.4	Likelihood Ratio Test	54
2.5	Linear and Generalized Linear Models	55
2.5.1	Linear Models	55
2.5.2	Generalized Linear Models	57
2.6	Mixture Models and EM Algorithm	59
2.7	Bayesian Analysis	61
2.7.1	General Framework of Bayesian Analysis	62
2.7.2	Empirical and Hierarchical Bayesian Analysis	63
2.7.3	Markov Chain Monte Carlo Simulation	64
2.7.4	Bayes Factor	65
2.8	Samplers for Markov Chain Monte Carlo Simulation	66
2.8.1	The Gibbs Sampler	66
2.8.2	Metropolis-Hastings Algorithm	67
2.8.3	Reversible Jump MCMC	68
2.8.4	Extracting Information from the MCMC Sequence .	70
2.9	An Overview on Feature Selection with Small- n -Large- p Models	71
2.10	Model Selection Criteria for Small- n -Large- p Models	73
3	Quantitative Genetics and General Issues on QTL Mapping	77
3.1	Distributional Features of Genetic Quantitative Traits	77
3.1.1	Features of Genetic and Non-genetic Quantitative Traits	78

3.1.2	Features of Genetic Traits Affected by Major and Minor QTL	78
3.2	Genetic Values and Variances	80
3.2.1	Genotype and Allele Frequencies	81
3.2.2	Genetic Values	82
3.2.3	Genetic Variance and Heritability	85
3.3	Statistical Models with Known QTL Genotypes	86
3.3.1	Models with Single QTL	86
3.3.2	Models with Multiple QTL	87
3.4	Conditional Probabilities of Putative QTL Genotypes Given Markers	88
3.4.1	Conditional Probabilities of Putative QTL Genotypes in Backcross and Intercross Populations	88
3.4.2	Conditional Probabilities of Putative QTL Genotypes in RILs	93
3.4.3	Comparison of Conditional Probabilities under Different Assumptions on Crossover Interference	96
3.5	QTL Mapping Data	97
4	One-dimensional Mapping Approaches	101
4.1	QTL Mapping by Single-marker Analysis	101
4.2	Single Interval Mapping	104
4.2.1	Interval Mapping by Normal Mixture Models	104
4.2.2	Interval Mapping by Haley-Knott Regression	109
4.2.3	A Remark	111
4.3	Composite Interval Mapping	112
4.3.1	Composite Interval Mapping with Normal Mixture Models	112
4.3.2	Composite Interval Mapping with Haley-Knott Regression	114
4.3.3	Choice of Adjusting Markers	114
4.4	Determination of Threshold Values	115
4.4.1	Theoretical Approximation	116
4.4.2	A Simulation Approach	117
4.4.3	Permutation Test	118
4.5	Determination of Sample Sizes	120
4.5.1	The Case with Known QTL Genotypes	120
4.5.2	The Case of Interval Mapping	123
4.6	Selective Genotyping	125
5	Multiple Interval Mapping	131
5.1	Gaussian Mixture Models for QTL Mapping	132
5.2	An EM algorithm for Gaussian Mixture Models	134

5.3	Mixture Generalized Linear Models	137
5.4	General EM Algorithms for Mixture Generalized Linear Models	139
5.4.1	EM Algorithm for Backcross Design	140
5.4.2	Adaptation for Intercross Design	144
5.4.3	A Special Issue on Binary Traits	145
5.5	Multiple Interval Mapping Procedures	146
5.6	Example: The Analysis of Radiata Pine Data	149
5.7	Multiple Interval Mapping with Polytomous Traits	149
5.7.1	Mixture Models for Ordinal Traits	150
5.7.2	EM Algorithm for Mixture Polytomous Models	155
5.7.3	Multiple Interval Mapping with Nominal Traits	157
5.8	Multiple Interval Mapping of Traits with Spike Distributions	158
5.8.1	The Mixture Models for Traits with Spike Distributions	159
5.8.2	EM Algorithm for Traits with Spike Distributions	160
5.8.3	The Mapping Strategy	163
5.8.4	Example: The Analysis of Mouse <i>Listeria monocytogenes</i> Infection Data	163
5.8.5	Single-QTL Methods and Comparisons	164
6	QTL Mapping with Dense Markers	167
6.1	Feature Selection Methods for QTL Mapping	167
6.1.1	Preliminary Screening	168
6.1.2	QTL Mapping by Penalized Likelihood Methods	170
6.1.3	Example: Analysis of CGEMS Prostate Cancer Data	171
6.1.4	QTL Mapping by Sequential Methods	173
6.1.4.1	Sequential Methods for Gaussian Traits	174
6.1.4.2	Sequential Methods for Non-Gaussian Traits	176
6.1.4.3	Example: Analysis of F_2 Rat Data	178
6.2	QTL Mapping with Consideration of QTL Epistatic Effects	179
6.2.1	Special Natures of Interaction Models for QTL Mapping	179
6.2.2	The Mapping Procedure with Interaction Models	181
6.2.3	Example: Mapping QTL for Locomotor Activation and Anxiety with F_2 Mouse Model	183
7	Bayesian Approach to QTL Mapping	185
7.1	The Framework of the Bayesian Approach to QTL Mapping	185
7.2	Bayesian QTL Mapping with Inbred Line Cross Data	187
7.2.1	Bayesian Models without Epistatic Effects	188
7.2.1.1	The Number of QTLs Treated as Fixed	189
7.2.1.2	The Number of QTLs Treated as a Random Variable	192
7.2.1.3	Example: Mapping Loci Controlling Flowering Time in <i>Brassica napus</i>	195

<i>Contents</i>	xi
7.2.2 Bayesian Models with Epistatic Effects	199
7.2.3 Example: Mapping QTL Affecting Heading in Two-Row Barley	205
7.2.4 Missing Marker Genotypes and Other Issues	206
7.3 Bayesian QTL Mapping for Outbred Offsprings	209
7.3.1 The Prior on Marker Haplotypes and QTL Genotypes	209
7.3.2 The MCMC Procedures for Mapping with Outbred Offsprings	213
7.4 Bayesian QTL Mapping for Ordinal Polytomous Traits	214
8 Multi-trait QTL Mapping and eQTL Mapping	219
8.1 Multi-trait QTL Mapping I: Single-QTL Model Approaches .	220
8.1.1 One-trait-at-a-time Method	220
8.1.2 Meta-trait Method	221
8.1.3 Multivariate Composite Interval Mapping	222
8.2 Multi-trait QTL Mapping II: Multi-QTL Model Approaches	227
8.2.1 Sparse Partial Least Squares Regression	228
8.2.2 Multivariate Sequential Procedures	230
8.2.3 Bayesian Approaches	237
8.3 eQTL Mapping Approaches	244
8.3.1 Specific Features of eQTL Mapping	245
8.3.2 Approaches Based on Single-QTL Models	246
8.3.3 Multi-QTL Model Methods	251
8.3.4 Clustering of Transcripts	252
8.3.5 General eQTL Mapping Strategies	260
8.3.6 Case Study: eQTL Mapping with GEO Mouse Data GSE3330	261
Bibliography	267
Index	285
